

Ultimate One

Multi-Point

The Ultimate One has been developed for commercial applications, providing an unmovable resistance to suction from negative pressure using a C-Groove system. Perfect in extreme weather or high pressure situations, the Ultimate One provides a safe, secure and reliable aluminium window locking option.

The components of the Ultimate One curtain walling system have been developed to support each other in controlling opening vents weighing up to 150kg.

Features:

- With just one control handle, the vent is secured on three sides through the bi-parting rack and pinion mechanism operating the multi-point lock
- Designed to suit industry standard C-Groove
- New Zealand made

Options:

- Locking, non-locking and removable handle options are all available
- Locking can be 2 or 3-point on one window edge or 4 to 6-point for three edges
- Ultimate One can be used as just a multi-point locking kit or a complete curtain walling hardware package when combined with pivot and restrictor kit
- Snubber kits are available for high pressure applications
- Note: Actuator bars are required but not included in the Ultimate One system supplied

Note: Due to the nature of the Ultimate One curtain walling hardware, and the vast number of variables that need to be considered when recommending hardware for use with such large heavy sashes, ASSA ABLOY wishes to treat each enquiry on a case-by-case basis. Upon receipt of the project specification, ASSA ABLOY will provide a product recommendation and a customer installation drawing for each project.
